Faunal Remains: Taphonomical and Zooarchaeological Studies of the Animal Remains from Tell Hesban and Vicinity

Joachim Boessneck, Oystein Sakala LaBianca, Angela von den Driesch, Ralph E. Hendrix, Lori A. Haynes

Faunal Remains: Taphonomical and Zooarchaeological Studies of the Animal Remains from Tell Hesban and Vicinity by Øystein S. LaBianca and Angela von den Driesch. Published by Eisenbrauns, 1995.

This volume is devoted to the presentation of the zooarchaeological analysis of the nearly 100,000 animal bones. It includes taphonomical and zooarchaeological studies of the animal remains from Tell Hesban and vicinity. The contributors, Joachim Boessneck et al., provide a comprehensive overview of the faunal remains retrieved from two distinct refuse deposits dated to the Late Bronze and Iron Ages in the southern Levant. The analysis reveals the dietary practices of the ancient communities and the environmental context in which they lived.

The book is a valuable resource for archaeologists, zoologists, and historians interested in understanding ancient human remains and their archaeological context.
